

Feature: Sales Activity Daily Completion Experience

Feature Name

Sales Activity Completion System

Feature Overview

This feature introduces a gamified productivity experience within the Sales Agent Mobile App to encourage timely and complete CRM data entry throughout the workday.

The sales agent starts each day at **0% Daily Completion** and progressively increases completion status by performing key sales activities such as:

- Completing scheduled visits
- Registering voice interactions
- Updating opportunities
- Logging notes
- Creating follow-up tasks
- Attaching screenshots/documents
- Closing scheduled activities

The experience is designed to create a sense of achievement, momentum, and positive reinforcement while reducing the perception of CRM administration effort.

The system uses visual progress indicators, rewards, streaks, animations, and motivational feedback to make sales reporting feel engaging and rewarding.

Business Goal

Increase CRM adoption, improve field data quality, and reduce missing sales activity information by motivating sales agents through gamified experiences and progress tracking.

User Story

Title

Gamified Daily Sales Activity Completion

User Story

As a sales agent

I want my daily sales activities and CRM updates to contribute toward a visible completion goal

So that I feel motivated and rewarded for keeping my customer interactions updated throughout the day.

Core Concept

At the beginning of each workday:

- Daily Completion = 0%
- The user progresses toward 100% completion

Each meaningful action contributes points or completion percentages.

The goal is to create:

- A sense of progress
 - Small dopamine rewards
 - Reduced friction for CRM updates
 - Positive emotional engagement
-

Gamification Mechanics

Daily Completion Score

Example scoring model:

Activity	Completion Contribution
Arrive at scheduled visit	+10%
Register visit via AI voice	+20%
Update opportunity	+15%
Add follow-up task	+10%

Add +5%
screenshots/attachme
nts

Complete all +20%
scheduled visits

End-of-day summary +20%
completion

Maximum daily progress:

- 100%
-

Visual Experience

1. Daily Progress Bar

A persistent animated progress bar displayed on:

- Home screen
- Map dashboard
- Schedule view

Example:

“Today’s Progress: 65% Complete”

Behavior:

- Smooth animated increases
 - Celebration effects when milestones are reached
-

2. Achievement Milestones

Milestones trigger positive feedback:

- 25% → “Great Start!”
- 50% → “You’re on track!”
- 75% → “Excellent field activity!”
- 100% → “Daily Mission Complete!”

Optional:

- Sounds
 - Haptic feedback
 - Small confetti animations
-

3. AI Motivational Feedback

The AI assistant provides encouraging contextual responses such as:

- “Nice work documenting that customer interaction.”
- “You’re almost done with today’s activities.”
- “Only one more update to complete your day.”

The tone should feel:

- Professional
- Supportive
- Non-childish

- Lightweight and modern
-

4. Activity Streaks

Track consecutive days with:

- 100% completion
- Complete schedule execution
- No missing CRM updates

Examples:

- “5-Day Completion Streak”
 - “10 Consecutive Fully Logged Days”
-

5. Smart Recommendations

The app suggests quick-win actions to help agents progress:

- “Add follow-up notes to reach 80%.”
 - “Complete your final customer visit to finish today’s goal.”
-

UX Design Concepts

Home Dashboard Widget

A card displaying:

- Daily completion %
- Remaining activities

- Next recommended action
 - Streak status
-

Circular Progress Indicator

Instead of only a standard bar:

- Circular completion ring around profile icon
 - Gradual color progression
 - Animated transitions
-

Map Integration

Scheduled customer pins change state:

- Gray → Pending
- Blue → In Progress
- Green → Completed

This visually reinforces progress across the territory.

Functional Requirements

FR1 – Daily Progress Initialization

The system shall reset the daily completion score at the start of each workday.

FR2 – Activity-Based Progress Tracking

The system shall increase completion progress based on predefined user actions.

FR3 – Real-Time Progress Updates

The system shall update progress indicators immediately after qualifying actions.

FR4 – Achievement Notifications

The system shall display milestone messages when thresholds are reached.

FR5 – Streak Tracking

The system shall track consecutive successful completion days.

FR6 – Smart Suggestions

The system shall recommend remaining actions to achieve higher completion.

FR7 – Progress Persistence

The system shall store historical completion metrics for reporting purposes.

Acceptance Criteria

AC1 – Start at 0%

Given a new workday begins
When the sales agent logs in
Then daily completion starts at 0%.

AC2 – Completion Increase

Given the user performs a tracked activity
When the action is completed
Then the completion percentage increases automatically.

AC3 – Milestone Feedback

Given the user reaches a completion milestone
When the threshold is crossed
Then the system displays motivational feedback.

AC4 – 100% Completion

Given all required activities are completed
When the user reaches maximum progress
Then the system displays a “Day Complete” success state.

AC5 – Streak Recognition

Given the user completes multiple successful days consecutively
When streak conditions are met
Then streak information is displayed on the dashboard.

Suggested KPIs

KPI	Goal
CRM completion rate	Increase
Missing visit notes	Decrease
Opportunity update frequency	Increase

Follow-up task creation	Increa se
----------------------------	--------------

Daily active app usage	Increa se
---------------------------	--------------

Behavioral Design Principles

The feature should:

- Encourage behavior without pressure
- Avoid feeling childish or game-like in a negative way
- Reward consistency over competition
- Reduce cognitive load
- Reinforce productivity visually

Optional Future Enhancements

Team Leaderboards

- Regional rankings
- Weekly completion champions
- Friendly competition

Experience Levels

Examples:

- Explorer
 - Connector
 - Closer
 - Strategic Seller
-

AI Coaching Insights

- “Your best days happen when follow-ups are logged immediately.”
 - “You close more opportunities when visit notes are completed within 30 minutes.”
-

Rewards Integration

Optional integration with:

- Internal recognition systems
 - Sales incentives
 - Badges/certifications
-

Risks & Considerations

Risk

Mitigation

Gamification feels childish	Use professional visual language
-----------------------------	----------------------------------

Users game the system	Tie progress to meaningful actions
-----------------------	------------------------------------

Notification fatigue	Use limited, contextual reinforcement
----------------------	---------------------------------------

Overcomplexity	Keep interactions lightweight
----------------	-------------------------------

Non-Functional Requirements

- Real-time UI responsiveness
- Minimal battery impact
- Offline progress synchronization
- Accessibility-compliant visual indicators
- Smooth animations under mobile performance constraints

Definition of Done

- Daily progress engine implemented
- Progress bar integrated into dashboard

- Milestone feedback functioning
- Streak tracking operational
- Smart suggestions implemented
- UX animations validated
- QA/UAT completed
- Product Owner approval completed
