

Feature: Sales Agent Mobile App – Main Map & Navigation Experience

Epic

As a sales agent, I want to access a mobile platform that shows my current location and CRM-related information on a map so that I can efficiently manage customer visits, schedules, and sales activities during my workday.

User Story

Sales Agent Main Dashboard with Map Navigation and CRM Integration

As a sales agent

I want the mobile application to display my current location on an interactive map with CRM-related information after login

So that I can quickly identify my position, access customer information, manage my schedule, and navigate between key sales functions efficiently.

Description

After successful authentication, the sales agent lands on the main dashboard screen of the mobile application. The primary interface is an interactive map integrated with Google Maps displaying the agent's real-time location.

The application retrieves and prepopulates CRM-related customer information associated with the sales agent's territory or assignments. The dashboard also includes a persistent bottom navigation menu allowing the user to switch between the following sections:

- Clients
- Schedule
- Reporting
- Settings

This story only covers the main dashboard, map integration, navigation structure, and CRM data initialization. Detailed functionality for each module will be defined in separate features/stories.

Acceptance Criteria

AC1 – Successful Login Redirect

Given the sales agent successfully logs into the application

When authentication is completed

Then the user is redirected to the main dashboard screen.

AC2 – Display Agent Location on Map

Given the sales agent is on the dashboard

When location permissions are granted

Then the application displays the agent's real-time location on a Google Maps interface.

AC3 – Google Maps Integration

Given the dashboard screen is loaded

When the map initializes

Then the application integrates with Google Maps services successfully

And allows map interaction including zoom and pan.

AC4 – CRM Data Prepopulation

Given the sales agent accesses the dashboard

When CRM data is retrieved

Then customer-related information assigned to the sales agent is preloaded into the application session.

AC5 – Main Interface Layout

Given the dashboard is displayed

When the user views the screen

Then the map occupies the primary area of the interface

And the bottom navigation menu remains visible at all times.

AC6 – Bottom Navigation Options

Given the user is on the dashboard

When the bottom navigation is displayed

Then the following navigation options are available:

- Clients
 - Schedule
 - Reporting
 - Settings
-

AC7 – Navigation Between Screens

Given the user selects a navigation option

When the button is tapped

Then the application navigates to the corresponding module screen.

AC8 – Location Permission Handling

Given the user has not granted location permissions

When the application requests access

Then the user receives a permission prompt

And the application displays an appropriate message if permission is denied.

Business Rules

- The map view is the default landing screen after login.
 - Google Maps is the mandatory mapping provider.
 - CRM customer information must be linked to the authenticated sales agent.
 - Navigation buttons must remain accessible across the application.
 - Location services require user authorization.
-

Non-Functional Requirements

- Map loading time should be under 3 seconds under normal network conditions.
 - The application must support Android and iOS mobile devices.
 - User location updates should refresh in near real-time.
 - CRM data must be securely transmitted using encrypted communication.
 - The UI should remain responsive across standard mobile screen sizes.
-

Dependencies

- Google Maps API integration
 - CRM backend services
 - Authentication service
 - Mobile device GPS/location services
-

Out of Scope

The following functionalities will be covered in separate features:

- Client management details
- Schedule management functionality

- Reporting dashboards and KPIs
 - User settings and profile management
 - Route optimization/navigation assistance
 - Notifications and reminders
-

Definition of Done

- Map dashboard implemented and accessible after login
- Google Maps successfully integrated
- Agent location displayed accurately
- CRM data retrieved and prepopulated
- Bottom navigation functional
- Acceptance criteria validated
- QA testing completed on Android and iOS
 - Product Owner approval completed
