

Feature: AI Customer Briefing & Proximity-Based Voice Insights

Feature Name

AI Smart Customer Briefing & Contextual Voice Notifications

Feature Overview

This feature expands the AI capabilities of the Sales Management Platform by introducing an intelligent customer briefing system that proactively summarizes critical CRM information before customer interactions.

The system automatically generates concise, actionable AI briefings using CRM and contextual sales data, then delivers those insights to the sales agent:

- As a push notification
- As a readable summary card
- As AI voice playback while approaching the customer location
- Or manually when selecting the customer from the account menu

The goal is to help sales agents enter meetings fully prepared without manually reviewing multiple CRM records.

Business Goal

Increase customer meeting effectiveness, improve CRM data awareness, and reduce missed actions by proactively surfacing the most important customer insights at the right time.

User Story

Title

User Story

As a sales agent

I want AI-generated customer briefings with important CRM insights to be automatically delivered before customer visits

So that I can quickly understand the customer status, pending actions, and opportunity context before entering the meeting.

Main Experience

The feature continuously monitors:

- Customer visit schedules
- User GPS location
- Route progression
- CRM account context

When the sales agent approaches a customer destination or manually selects an account:

- The AI generates a briefing summary
 - The system triggers a notification
 - The user can hear the briefing through AI voice playback
 - The user can also view a readable briefing panel
-

Trigger Scenarios

Scenario 1 – Proximity Trigger

When the sales agent is within a configurable threshold from the customer location:

- Default: 5 minutes driving distance
- Configurable by admin/user

The system triggers:

- Push notification
- Voice briefing availability

Example:

“You are approaching Acme Corporation. Would you like to hear your AI customer briefing?”

Options:

- Play Briefing
 - View Summary
 - Dismiss
-

Scenario 2 – Manual Trigger

The sales agent can manually open the briefing by:

- Selecting a customer pin from the map
 - Selecting an account from the bottom account menu
 - Opening the My Day section
-

AI Briefing Content

The AI briefing consolidates information from:

- CRM records
- Salesforce objects
- Opportunities
- Tasks
- Activities
- Notes
- Emails
- Prior meetings
- Follow-up actions
- Account updates

The goal is to present:

- Only the most relevant information
 - In a concise and actionable format
-

AI Briefing Sections

1. Customer Overview

Displays:

- Account name
- Account status
- Account tier/priority
- Last visit date
- Primary contact

Example:

“Acme Corporation – Enterprise Account – Last visited 12 days ago.”

2. Summary of Last Interactions

AI-generated summary of:

- Previous visits
- Calls
- Emails
- Notes
- Follow-ups

Example:

“During the last meeting, the customer requested revised pricing for Project Delta and expressed concerns about delivery timelines.”

3. Missing or Pending Tasks

Displays:

- Overdue tasks
- Pending follow-ups
- Uncompleted actions

Examples:

- “Follow-up quote pending for 5 days.”
- “Customer requested updated contract.”
- “Technical demo task overdue.”

4. Opportunity Overview

Displays:

- Active opportunities
- Opportunity value
- Current stage
- Risk indicators
- Stalled opportunities

Example:

Opportunity	Value	Stage	Status
Project Delta	\$120K	Negotiation	At Risk
Expansion Phase	\$80K	Proposal	Healthy

5. Missing CRM Information

AI identifies missing or outdated CRM fields such as:

- No recent visit notes
- Missing contact information
- Outdated account details
- Missing opportunity updates

Example:

“No account activity has been logged in 18 days.”
“Primary contact phone number missing.”

6. AI Suggested Focus Areas

AI-generated recommendations:

- “Discuss delayed quote approval.”
 - “Confirm budget timeline.”
 - “Follow up on open escalation ticket.”
-

AI Voice Playback

The user can hear the briefing through AI voice narration.

Voice playback should:

- Sound conversational and professional
- Be concise
- Avoid reading unnecessary CRM fields
- Prioritize actionable insights

Example:

“You are visiting Acme Corporation. Last interaction included discussion around Project Delta pricing. There is one overdue follow-up task and two active opportunities totaling two hundred thousand dollars.”

Functional Requirements

FR1 – Proximity Monitoring

The system shall monitor the sales agent’s proximity to scheduled customer destinations.

FR2 – AI Brief Generation

The system shall generate AI customer briefings using CRM and contextual data.

FR3 – Push Notification Trigger

The system shall trigger notifications when proximity thresholds are reached.

FR4 – AI Voice Playback

The system shall support AI-generated voice narration of customer briefings.

FR5 – Manual Brief Access

The system shall allow manual briefing access from:

- Map pins
 - Account menu
 - My Day section
-

FR6 – CRM Insight Consolidation

The system shall summarize:

- Tasks
 - Opportunities
 - Activities
 - Account updates
 - Interaction history
-

FR7 – Missing Information Detection

The system shall identify missing or outdated CRM information.

FR8 – AI Recommendations

The system shall generate suggested talking points and focus areas.

FR9 – User Control

The user shall be able to:

- Pause voice playback
 - Replay briefings
 - Disable notifications
 - Configure trigger distance
-

Acceptance Criteria

AC1 – Proximity Notification

Given the sales agent approaches a scheduled customer location
When the configured threshold is reached
Then the system sends an AI briefing notification.

AC2 – AI Brief Playback

Given the user selects “Play Briefing”
When voice playback begins
Then the AI reads the summarized customer context aloud.

AC3 – CRM Summary Visibility

Given the customer briefing is opened
When the summary loads
Then recent interactions, tasks, opportunities, and account updates are displayed.

AC4 – Missing Information Detection

Given CRM information is incomplete or outdated
When the AI generates the briefing
Then missing information warnings are displayed.

AC5 – Manual Brief Access

Given the user selects a customer from the map or account menu
When the briefing panel opens
Then the AI-generated summary is available.

AC6 – Opportunity Context

Given active opportunities exist
When the briefing is generated
Then relevant opportunity details are summarized.

Suggested AI Prompting Logic

The AI should prioritize:

- 1. Immediate action items
 - 2. High-value opportunities
 - 3. Customer risks/escalations
 - 4. Missing CRM information
 - 5. Recent interaction summaries
 - 6. Suggested talking points
-

Suggested Data Sources

Source	Information
Salesforce CRM	Accounts, opportunities, activities
Tasks Module	Follow-ups and overdue items
Calendar/Events	Scheduled visits
Notes/Emails	Interaction summaries
Route Engine	Proximity detection
AI/RAG Engine	Insight generation

UX Expectations

The briefing experience should feel:

- Fast
- Helpful
- Executive-level
- Contextual

- Non-intrusive
- Voice-first friendly

The user should receive:

- High-value information only
 - Minimal noise
 - Easy-to-consume summaries
-

Notification Examples

Standard Brief

“Upcoming customer visit: Acme Corporation. Two active opportunities and one overdue follow-up task require attention.”

Risk Alert

“Customer escalation detected for Globex Manufacturing. Last support issue remains unresolved.”

Missing Information Reminder

“No meeting notes have been added for the last two customer interactions.”

Non-Functional Requirements

- AI briefing generation under 5 seconds
 - Voice playback startup under 2 seconds
 - Battery-efficient GPS monitoring
 - Secure encrypted CRM data processing
 - Offline cached briefing support
 - Scalable AI summarization engine
-

Risks & Considerations

Risk	Mitigation
AI overloads user with information	Prioritized summarization
Frequent notifications	Configurable thresholds
Incorrect AI interpretation	Manual CRM access available
Privacy concerns	Role-based data visibility

Future Enhancements

AI Conversation Coaching

Examples:

- “This customer responds positively to ROI discussions.”
 - “Mention recent successful deployment with similar client.”
-

Smart Follow-Up Generation

AI automatically suggests:

- Tasks
 - Emails
 - Next meetings
-

Sentiment Analysis

AI detects:

- Customer frustration
 - Positive momentum
 - Relationship risk
-

Voice Interaction

User can respond:

“Create a follow-up reminder for pricing approval.”

Definition of Done

- Proximity trigger implemented
- AI customer briefing generation operational
- Voice playback functioning
- CRM summary integration completed
- Missing information detection implemented
- Manual briefing access available
- Push notifications validated
- AI recommendations integrated
- QA/UAT completed
- Product Owner approval complete
