

Feature: Intelligent Customer Map Pins & Nearby Account Discovery

Feature Name

Interactive CRM Map Intelligence & Nearby Customer Discovery

Feature Overview

This feature enhances the **Main Map & Navigation Experience** by transforming the map into an intelligent sales workspace that provides real-time customer awareness, account context, and AI-driven nearby opportunity discovery.

The sales agent can:

- View customer/account locations directly on the map
- Tap customer pins to view summarized CRM insights
- See nearby active accounts and opportunities
- Receive AI-powered proximity alerts
- Discover productive visit opportunities while in transit

The feature turns the map into an active decision-making tool instead of only a navigation interface.

Business Goal

Increase sales productivity and customer engagement by helping sales agents identify relevant nearby accounts, opportunities, and tasks during their daily route execution.

User Story

Title

User Story

As a sales agent
I want to see customer locations and CRM insights directly on the map and receive AI recommendations for nearby active accounts
So that I can maximize productive customer interactions while traveling during my workday.

Main Experience

The map becomes the primary operational interface showing:

- Scheduled customer visits
- Active customer accounts
- Nearby opportunities
- Customer activity indicators
- Route progress
- AI-generated nearby recommendations

The sales agent can:

- Tap map pins for quick CRM summaries
 - View account health indicators
 - Access opportunities and tasks
 - Receive nearby customer recommendations
 - Launch navigation directly from the map
-

Customer Map Pins

Pin Types

Pin Type	Meaning
Green Pin	Scheduled visit
Blue Pin	Active account nearby
Yellow Pin	Opportunity attention needed

Red Pin Escalation/risk account
Gray Pin Previously visited/completed

Customer Summary Card

When the user taps a customer pin, a contextual information card appears.

The summary card displays:

Account Information

- Account name
 - Customer type
 - Last interaction date
 - Account status
-

Distance & Travel Information

- Distance from current location
- Estimated driving time
- ETA if selected

Example:

“2.3 miles away – 7 min drive”

Opportunity Snapshot

Displays:

- Active opportunities
- Opportunity value
- Current sales stage
- Risk indicators

Example:

Opportunity	Value	Stage
-------------	-------	-------

New Warehouse	\$50,000	Proposal
Expansion Phase 2	\$120,000	Negotiation

Task Summary

Displays:

- Pending follow-ups
- Overdue tasks
- Upcoming actions

Example:

- “Follow up on pricing proposal”
 - “Review customer escalation”
 - “Schedule technical demo”
-

AI Contextual Insights

Optional AI-generated insight examples:

- “Customer has not been visited in 45 days.”
 - “Opportunity probability increased last week.”
 - “Nearby account with open quote awaiting response.”
-

Nearby Account Discovery

AI Nearby Recommendations

The system continuously analyzes:

- User location
- CRM data
- Route progression
- Customer proximity
- Opportunity urgency
- Account activity

The AI can proactively recommend nearby accounts.

Example Notifications

Nearby Opportunity Alert

“You are 4 minutes away from Horizon Builders. There is an active opportunity worth \$85,000 awaiting follow-up.”

Productivity Opportunity Alert

“You have a 30-minute gap before your next meeting. Two nearby active accounts could be visited.”

Follow-Up Reminder

“Nearby customer Acme Corp has not received a follow-up after the last proposal.”

Smart Prioritization Logic

The AI prioritizes nearby recommendations based on:

- Opportunity value
 - Account tier
 - Last interaction date
 - Renewal timing
 - Open support escalations
 - Meeting gaps
 - Route efficiency
 - Customer engagement risk
-

Functional Requirements

FR1 – Customer Pin Visualization

The system shall display customer/account locations on the map.

FR2 – Interactive Pin Selection

The system shall display a contextual CRM summary when a map pin is selected.

FR3 – Distance Calculation

The system shall display distance and ETA information for selected customers.

FR4 – Opportunity Display

The system shall display opportunity summaries associated with selected accounts.

FR5 – Task Visibility

The system shall display open CRM tasks related to the account.

FR6 – Nearby Account Detection

The system shall detect nearby active customer accounts relative to the sales agent's location.

FR7 – AI Recommendation Engine

The system shall generate contextual recommendations for nearby customer engagement opportunities.

FR8 – Intelligent Notifications

The system shall send proximity-based AI alerts for nearby accounts/opportunities.

FR9 – Navigation Launch

The system shall allow the user to launch navigation directly from the customer summary card.

FR10 – Real-Time Map Updates

The system shall dynamically update map pins and account statuses during the day.

Acceptance Criteria

AC1 – Customer Pins Displayed

Given customer accounts exist in the territory

When the map loads

Then customer locations are displayed as interactive map pins.

AC2 – Pin Selection Summary

Given the user taps a customer pin

When the summary card opens

Then account, distance, opportunities, and tasks are displayed.

AC3 – Nearby Opportunity Alert

Given the sales agent is near an active customer account
When recommendation conditions are met
Then the system sends an AI-generated nearby account notification.

AC4 – Opportunity Visibility

Given active opportunities exist for the account
When the customer summary is displayed
Then relevant opportunities are visible.

AC5 – Route Integration

Given a customer is selected
When navigation is requested
Then the application launches route guidance.

AC6 – Real-Time Updates

Given account or opportunity data changes
When synchronization occurs
Then the map information refreshes automatically.

AI Recommendation Examples

Scenario	AI Recommendation
Long schedule gap	Suggest nearby customer visit
Nearby open opportunity	Recommend follow-up
Customer inactive for 60 days	Recommend check-in
Nearby overdue task	Suggest immediate completion
Route overlap	Suggest optimized stop addition

UX Design Expectations

The map experience should feel:

- Lightweight
- Interactive
- Context-aware
- Executive/professional
- Operationally efficient

The user should never feel overwhelmed with data density.

Suggested Interaction Model

Action	Result
Tap customer pin	Open summary card
Swipe summary up	Expand CRM details
Tap opportunity	Open opportunity detail
Tap task	Open/update task
Tap Navigate	Launch maps navigation
Tap AI Insight	View recommendation details

Non-Functional Requirements

- Map pin rendering under 2 seconds
 - Real-time location refresh
 - Battery-efficient geolocation polling
 - Scalable support for large customer territories
 - Secure CRM data access
 - Smooth mobile gesture performance
-

Dependencies

- Google Maps API
 - CRM/ Salesforce Integration
 - AI Recommendation Engine
 - GPS Services
 - Push Notification Service
 - Route Optimization Engine
-

Risks & Considerations

Risk	Mitigation
Excessive notifications	Configurable AI sensitivity
Map clutter	Smart clustering of nearby pins
GPS inaccuracies	Adjustable radius thresholds
Recommendation irrelevance	AI learning & user feedback

Future Enhancements

Heatmap Layer

Visualize:

- Revenue concentration
 - High-value territories
 - Customer density
-

AI Opportunity Scoring

Prioritize nearby accounts based on:

- Close probability
 - Renewal urgency
 - Engagement score
-

Voice-Based Nearby Suggestions

Example:

“There is a nearby customer with an overdue proposal follow-up. Would you like to stop there?”

Smart Territory Optimization

AI suggests:

- Better route structures
 - Meeting clustering
 - Territory balancing
-

Definition of Done

- Customer map pins implemented
- Interactive summary cards operational
- Opportunity/task summaries functioning
- Nearby account AI recommendations implemented
- Proximity notifications validated
- Navigation integration completed
- Real-time map refresh functioning
- QA/UAT completed
- Product Owner approval completed
