

Feature: Sales Manager Command Center & Field Performance Analytics

Feature Name

Sales Manager Command Center – Team Visibility, Productivity Tracking & Performance Insights

Feature Overview

The **Sales Manager Command Center** provides sales leadership with a real-time operational and performance dashboard for managing field sales agents, customer coverage, CRM execution quality, and account engagement effectiveness.

The feature gives managers:

- Live visibility into agent locations
- Daily productivity tracking
- CRM completion monitoring
- Route and schedule adherence
- Account engagement insights
- Team performance analytics
- Individual agent drill-down views
- AI-driven performance recommendations

The experience combines:

- Operational visibility
 - Field workforce management
 - CRM activity intelligence
 - Gamified productivity metrics
 - Territory/account performance analysis
-

Business Goal

Improve sales execution quality, accountability, customer coverage, and team productivity through real-time operational insights and AI-enhanced management reporting.

User Story

Title

Sales Manager Team Performance & Field Visibility Dashboard

User Story

As a sales manager

I want to monitor my sales agents' productivity, CRM completion progress, account engagement, and real-time field activity

So that I can coach effectively, optimize performance, and ensure customer coverage objectives are being met.

Main Experience

The Sales Manager dashboard provides:

- Real-time agent map visibility
- Daily completion tracking
- CRM activity completion metrics
- Route execution visibility
- Account engagement reporting
- Agent productivity trends
- Team performance summaries
- Individual performance drill-downs

The interface supports:

- Executive overview monitoring
 - Tactical operational management
 - Coaching and accountability
 - Territory optimization
-

Primary Dashboard Components

1. Team Map View

Overview

Interactive live map showing:

- Sales agent locations
 - Current visit status
 - Assigned territories
 - Active customer meetings
 - Nearby opportunities
 - Route progress
-

Agent Status Indicators

Color	Meaning
Green	On schedule / productive
Yellow	At risk / delayed
Red	Missed visits / low completion
Blue	Currently in customer meeting
Gray	Offline / inactive

Map Interactions

Manager can:

- Click agent icon
 - Open quick summary
 - View live activity
 - Review route progression
 - Check current customer engagement
-

2. Daily Completion Dashboard

Displays:

- Team average completion %
- Individual completion %
- Daily progress trends
- Completed visits
- Remaining activities
- CRM update compliance

Example:

Agent Daily Completion

Rube 92%
n

Maria 76%

John 48%

3. Individual Agent Drill-Down

When selecting an agent, the manager sees:

Agent Summary

- Current location
- Schedule adherence
- Visits completed
- Route efficiency
- CRM completion rate
- Opportunity updates submitted
- Task completion percentage

Activity Timeline

Displays:

- Completed visits
- AI visit summaries
- Customer interactions
- Follow-ups created
- Missed meetings
- Delayed appointments

Performance Metrics

Metric	Example
Visits completed	7/9
CRM completion	94%
Opportunity updates	5
Follow-up tasks completed	12
Average response time	2 hrs
On-time arrival rate	91%

4. Task Completion Monitoring

Managers can monitor:

- Assigned tasks
- Completion rates
- Overdue activities
- Follow-up compliance
- SLA adherence

Visualizations:

- Completion bars
 - Trend charts
 - Heatmaps
 - Daily productivity scores
-

5. Account Performance Reporting

Managers can analyze:

- Account engagement frequency
- Visit coverage
- Opportunity progression
- Customer inactivity risks

- Revenue pipeline health
-

AI Insights & Recommendations

AI Coaching Suggestions

Examples:

- “Maria closes more opportunities when follow-up tasks are completed within 24 hours.”
 - “Ruben has missed two visits this week due to route inefficiencies.”
 - “Acme Corporation has not been visited in 45 days.”
-

Risk Detection

AI identifies:

- Low customer engagement
 - Missed follow-ups
 - Stalled opportunities
 - Territory neglect
 - Low CRM adoption
-

Productivity Optimization

AI suggests:

- Better territory allocation
 - Route improvements
 - Additional nearby visits
 - Coaching opportunities
-

Functional Requirements

FR1 – Real-Time Agent Location Tracking

The system shall display sales agent locations on a live map.

FR2 – Team Completion Visibility

The system shall display daily completion percentages for all agents.

FR3 – Individual Agent Drill-Down

The system shall provide detailed individual performance views.

FR4 – CRM Completion Monitoring

The system shall track CRM activity completion by agent.

FR5 – Route Execution Monitoring

The system shall display route adherence and completed visits.

FR6 – Task Completion Reporting

The system shall display task completion and overdue activity metrics.

FR7 – Account Engagement Analytics

The system shall provide account-level engagement reporting.

FR8 – AI Performance Insights

The system shall generate AI-driven coaching and performance recommendations.

FR9 – Historical Performance Analysis

The system shall allow managers to review daily, weekly, and monthly trends.

FR10 – Manager Notifications

The system shall notify managers about:

- Missed visits
 - Low activity
 - Escalations
 - High-risk accounts
-

Acceptance Criteria

AC1 – Agent Map Visibility

Given sales agents are active in the field

When the manager opens the dashboard

Then all active agents are displayed on the map.

AC2 – Individual Agent Selection

Given the manager selects an agent

When the detail panel opens

Then performance metrics and activity details are displayed.

AC3 – Daily Completion Display

Given the dashboard is loaded

When completion data is calculated

Then each agent's progress percentage is visible.

AC4 – Task Completion Visibility

Given tasks exist for an agent

When the manager reviews performance

Then completion and overdue metrics are displayed.

AC5 – Account Reporting

Given account engagement data exists

When reporting is generated

Then assigned account performance metrics are available.

Suggested Reporting Proposals

1. Team Productivity Dashboard

KPIs

- Daily completion %
 - Visits completed
 - CRM updates submitted
 - Follow-ups created
 - Opportunity updates
 - Average productive hours
-

2. Account Coverage Report

Metrics

- Accounts visited this week
- Accounts not visited in X days
- Customer engagement frequency
- Visit recurrence

- Account risk score
-

3. Opportunity Execution Report

Metrics

- Opportunity movement velocity
 - Pipeline progression
 - Opportunities updated after visits
 - Stalled opportunities
 - Revenue forecast accuracy
-

4. Territory Efficiency Report

Metrics

- Travel time vs customer time
 - Route efficiency
 - Visits per region
 - Territory density
 - Productive travel ratio
-

5. CRM Adoption Score

Metrics

- CRM completion rate
 - Visit note completion
 - Follow-up compliance
 - AI voice usage adoption
 - Missing activity percentage
-

6. Agent Performance Scorecard

Suggested Composite Score

Combines:

- Visit completion
- Opportunity progression
- CRM quality
- Customer engagement
- Task completion
- On-time performance

Example:

Category	Weight
Visit completion	25%
CRM updates	20%
Opportunity movement	25%
Task completion	15%
Customer coverage	15%

Visualization Suggestions

Recommended Dashboard Components

- Interactive maps
 - Leaderboards
 - Completion rings
 - Heatmaps
 - Trend lines
 - Territory overlays
 - Funnel charts
 - Productivity gauges
-

UX Expectations

The manager experience should feel:

- Executive
- Operational
- Data-rich but readable
- Actionable
- Coaching-oriented

The system should support:

- Desktop-first management experience
 - Tablet compatibility
 - Mobile quick views
-

Non-Functional Requirements

- Real-time map refresh under 10 seconds
 - Secure employee location handling
 - Role-based visibility permissions
 - Historical analytics scalability
 - Responsive dashboard performance
-

Dependencies

- CRM Integration
 - GPS Tracking Services
 - AI Analytics Engine
 - Reporting/Data Warehouse
 - Route Optimization Services
 - Notification Services
-

Risks & Considerations

Risk	Mitigation
------	------------

Excessive employee surveillance perception

Data overload

GPS inaccuracies

AI recommendation irrelevance

Transparent usage policies

Layered dashboards

Confidence indicators

Feedback learning system

Future Enhancements

AI Sales Coaching Assistant

Managers receive:

- Coaching recommendations
 - Risk alerts
 - Suggested interventions
-

Forecast Intelligence

AI predicts:

- Team goal attainment
 - Territory risk
 - Revenue outcomes
-

Comparative Benchmarking

Compare:

- Regions
 - Teams
 - Historical periods
-

Smart Manager Alerts

Examples:

- “Three enterprise accounts have not been visited this month.”
 - “Maria is trending 18% above regional productivity average.”
-

Definition of Done

- Team map visibility implemented
- Agent tracking operational
- Individual drill-down views completed
- Task completion analytics implemented
- Account engagement reporting functioning
- AI insights integrated
- Historical reporting validated
- Role permissions implemented
- QA/UAT completed
