|----|---|--|
| 1. | We will link CRM supplied account data with a GoogleMaps API so that the app knows when someone physically visits an office, the app recognizes an event and logs the event or requests a user input. | Done more or less |
| 2. | We will use notifications to prompt to ruser input | We need an ipho Integrate a Rag Product references Briefing, proprietary data to brief |
| 3. | We will gamify the inputs, the user starts with zero completion, and finishes the day with 100%. Making it fun and easy to give the data. | Make it fun color code fire ice |
| 4. | AI Powered digital assistant. Sandy | Instead of a Box it gives me a list of the topics we talked about. |
| 5. | Auto route plan. Based on activity level and data from notes, the route is proposed and must be accepted. | |

Done more or less

- | | | | | |
|----|-------------------------|--|---|---|
| 1. | Account info | Address, key contacts, credit limit, etc |  |  |
| 2. | Opportunity Information | Opportunity Name, Stage, | | |
| 3. | Tasks | Things that need to be done | | |
| 4. | Calendar | Mirrors the CRM Calendar | | |
| 5. | Activity | Recent account activity | | |

Activity creation:

- [illegible]

[illegible]

1. Route - manager sees route, who they saw, mileage
2. Reporting - activities completed score, red meaning they did no data entry, green meaning they entered all of their tasks
3. In App- messaging, the manager can say "It looks like you are seeing this account today, please get an update on topic x"
