

#	Feature Name	Detailed Description	KPI (Data) Name	UX/UI Designer Guidelines (Manager Mobile View Data Source)	"Super Cool" Insight Provided	RDI to Company	Development & Product Owner Notes (PO & Dev Requirements)
1	Voice-to-Data CRM Transcription Pipeline	While driving, reps record audio updates. Natural Language Processing (NLP) parses this audio, matches it to existing Salesforce account profiles, and updates specific fields (e.g., deal stage, budget) automatically, eliminating manual logging.	Data Freshness Index & Activity Velocity	UX/UI Designer Guidelines (Manager Mobile View Data Source): 1) Component: Fast Card with Viewform. 2) Pattern: A vertical scrolling timeline "Activity Feed". Each item displays an expandable audio waveform (green) alongside the transcribed text, highlighting mapped fields in green. Shaded background accounts get a prominent amber border and a "Tap to Coast" floating action button. 3) Component: Map Carves with Bottom Sheet Sheets. 4) Pattern: Full-screen vector map. Reps are shown as active entities. When an alert triggers, a pull-up bottom sheet slides into view displaying the dominant client's name, a 10-minute real-time countdown timer, and a glowing "Approve Route Decision" primary button. 5) Component: Leaderboard Cards with Micro-animations. 6) Pattern: Use a tabbed interface splitting "Revenue" from "Activity Streaks". Use a profile-seeking list where reps moving up the ladder have subtle pulse animations. Tapping a rep pulls open a radar chart showing their behavioral balance (Meetings vs. App Updates). 7) Component: Street Chart & Stacked Progress Bars.	App Native Microphone API + NLP Parsing Engine + Salesforce REST API Field Mapping.	Voice Sentiment Flags: Sentiment Analysis flags accounts where the rep sounded unconfident or the client used hesitant wording, prioritizing them for manager coaching/intervention.	Saves 4-5 hours/work per rep of admin Dev. Must integrate an async audio-queue worker (e.g., AWS SQS + Whisper API) to handle background transcription when cellular data is spotty on the road. PO: Define JSON schema mapping rep notes to Salesforce picklists (e.g., "stage changed to negotiation"). Include a manual "Review & Confirm" push notification if NLP
2	Predictive Territory "Warm-Stop" Routing	A map view that dynamically suggests "warm" leads nearby when a field rep has a last-minute cancellation. It uses accounts based on proximity, Salesforce historical buying patterns, and external street signals.	Route Efficiency Ratio & Ad-hoc Meeting Conversion Rate	UX/UI Designer Guidelines (Manager Mobile View Data Source): 1) Pattern: A macro overview page utilizing a about chart tracking aggregate team time spent "in meetings" vs. "in travel". Individual rep tap-to-open displays a linear timeline progress bar with shaded segments representing physical client stop lengths. 2) Component: Color-Graded Heat Overlay with Search Filters. 3) Pattern: Dark mode map interface optimized for data contrast. Use a density gradient (Red = Cold/Deserted; Green = High Potential). Floating call buttons at the top let managers toggle between displaying a linear timeline progress bar with shaded segments representing physical client stop lengths. "Taps" in real time. 4) Component: Live Ticker Feed with Open Rate Indicator. 5) Pattern: A horizontal scrolling "Live Notification" slider at the top of the manager's home dashboard. Active document opens pulse with a green radial animation. Tapping a rep in the notification opens a one-click contextual action button to "Call Rep" immediately.	Mobile GPS Location + Salesforce Historical Purchase & Activity Data + Google Maps Matrix API.	The "Drop-in Trigger": Alerts the manager when a rep is within 1 mile of a high-value dormant client who just opened a marketing email 10 minutes ago.	Reduces empty windshield time by 25% and attracts incremental revenue out of existing travel hours.
3	Sanitized "Streaks" & Performance Dashboards	Turns standard KPI tracking into an interactive, fun leaderboard experience for field reps. Points are awarded for face-to-face check-ins, app data updates, and closed won deals, keeping the road warrior experience engaging.	Field Engagement Rate & Pipeline Generation Velocity	UX/UI Designer Guidelines (Manager Mobile View Data Source): 1) Pattern: A macro overview page utilizing a about chart tracking aggregate team time spent "in meetings" vs. "in travel". Individual rep tap-to-open displays a linear timeline progress bar with shaded segments representing physical client stop lengths. 2) Component: Color-Graded Heat Overlay with Search Filters. 3) Pattern: Dark mode map interface optimized for data contrast. Use a density gradient (Red = Cold/Deserted; Green = High Potential). Floating call buttons at the top let managers toggle between displaying a linear timeline progress bar with shaded segments representing physical client stop lengths. "Taps" in real time. 4) Component: Live Ticker Feed with Open Rate Indicator. 5) Pattern: A horizontal scrolling "Live Notification" slider at the top of the manager's home dashboard. Active document opens pulse with a green radial animation. Tapping a rep in the notification opens a one-click contextual action button to "Call Rep" immediately.	App Check-in logs + Salesforce Opportunity Objects + "app Engagement Database".	Hidden Champions Index: Identifies reps with low current closed revenue but exceptionally high "micro" behaviors (e.g., high streak counts), accurately predicting future breakout sales.	Boosts CRM adoption rates to over 95% and increases gross meeting volume by 25% through healthy peer competition.
4	Geofenced Automatic Check-in & Duration Auditor	The app automatically registers when a salesperson arrives at a client's location and tracks the duration of the visit without requiring manual app interaction, logging it back into Salesforce events.	Face-Time Density Ratio (Face-to-Face Time vs. Driving Time)	UX/UI Designer Guidelines (Manager Mobile View Data Source): 1) Pattern: A macro overview page utilizing a about chart tracking aggregate team time spent "in meetings" vs. "in travel". Individual rep tap-to-open displays a linear timeline progress bar with shaded segments representing physical client stop lengths. 2) Component: Color-Graded Heat Overlay with Search Filters. 3) Pattern: Dark mode map interface optimized for data contrast. Use a density gradient (Red = Cold/Deserted; Green = High Potential). Floating call buttons at the top let managers toggle between displaying a linear timeline progress bar with shaded segments representing physical client stop lengths. "Taps" in real time. 4) Component: Live Ticker Feed with Open Rate Indicator. 5) Pattern: A horizontal scrolling "Live Notification" slider at the top of the manager's home dashboard. Active document opens pulse with a green radial animation. Tapping a rep in the notification opens a one-click contextual action button to "Call Rep" immediately.	Smart device background location + Salesforce Account Address coordinates + Geofencing APIs.	The Smart Meet Duration: Quantifies exactly how many minutes a face-to-face meeting needs to last to maximize close probability, revealing if reps are over- or under-staying.	Eliminates inaccurate or "faked" meeting logs, ensuring 100% accurate field activity data for strategic resourcing.
5	Territory Market Penetration & Heatmapping	A macro visual interface for managers that overlays active customers, prospective leads, and rep physical paths over a city map to identify geographic dead zones or oversaturated areas.	Territory Penetration Rate & Market Share Heat Index	UX/UI Designer Guidelines (Manager Mobile View Data Source): 1) Pattern: A macro overview page utilizing a about chart tracking aggregate team time spent "in meetings" vs. "in travel". Individual rep tap-to-open displays a linear timeline progress bar with shaded segments representing physical client stop lengths. 2) Component: Color-Graded Heat Overlay with Search Filters. 3) Pattern: Dark mode map interface optimized for data contrast. Use a density gradient (Red = Cold/Deserted; Green = High Potential). Floating call buttons at the top let managers toggle between displaying a linear timeline progress bar with shaded segments representing physical client stop lengths. "Taps" in real time. 4) Component: Live Ticker Feed with Open Rate Indicator. 5) Pattern: A horizontal scrolling "Live Notification" slider at the top of the manager's home dashboard. Active document opens pulse with a green radial animation. Tapping a rep in the notification opens a one-click contextual action button to "Call Rep" immediately.	Salesforce Accounts + Leads Data + CRM mapping layer + App physical route logs.	Competitor Infiltration Maps: Highlights high-potential economic zones where your competitors are active but your field reps are completely bypassing due to outdated routing habits.	Optimizes territory division, cutting fuel overhead costs while uncovering completely untapped regional revenue pockets.
6	In-the-Moment Mobile Customer Delivery Tracker	Enables reps to text or email tailored sales content (Brochures, case studies) directly through the app immediately following a handshakes, tracking client interaction instantly.	Collateral Engagement Velocity & Follow-up Lead Response Time	UX/UI Designer Guidelines (Manager Mobile View Data Source): 1) Pattern: A macro overview page utilizing a about chart tracking aggregate team time spent "in meetings" vs. "in travel". Individual rep tap-to-open displays a linear timeline progress bar with shaded segments representing physical client stop lengths. 2) Component: Color-Graded Heat Overlay with Search Filters. 3) Pattern: Dark mode map interface optimized for data contrast. Use a density gradient (Red = Cold/Deserted; Green = High Potential). Floating call buttons at the top let managers toggle between displaying a linear timeline progress bar with shaded segments representing physical client stop lengths. "Taps" in real time. 4) Component: Live Ticker Feed with Open Rate Indicator. 5) Pattern: A horizontal scrolling "Live Notification" slider at the top of the manager's home dashboard. Active document opens pulse with a green radial animation. Tapping a rep in the notification opens a one-click contextual action button to "Call Rep" immediately.	App Content Delivery System + Salesforce Contact Records + iMessage/iCloud.	The Drive-Away Alert: Alerts the manager if a client opens a proposal while the rep is still driving away from their office, sparking an immediate follow-up opportunity.	Dev: Wrap all sent document links in a unique trackable short-URL domain routed through a Webhook server to capture link clicks and time/capture web hooks. PO: Create a simplified "Quick-Share" tray in the mobile app interface accessible within 2 taps of concluding a meeting check-in. The manager alert should trigger an immediate slack push notice to the rep's phone.
