AI Day Briefing - gives me a full overview of my day

Acme Corporation >

Globex Manufacturing >

Intech Solutions >

Silenciar

My work

Appointment Time: ETA and time to destination

Who are we seeing: Ruben

AI Meeting brief

Most recent account activity

Current Opportunities

Opportunity 1: New Warehouse
Value: \$5,000
Stage:

Opportunity 2: New Hotel
Value: \$15,000
Stage:

Tasks

Task 1: check on account status, we need a check

Task 2: check on recent quote

If running behind, AI sends client a message stating that "David is running 5 minutes late", system configurable, i.e. this should be determined from the clients needs.
You also get a text when it's time to start moving.
Key: Maps API

Summarises the recent contact and what you need to do, user defined time before arrival, example: 5 minutes. User gets a notification, e.g. call brief is ready, would you like to hear it, user says yes, brief is played. E.g. you will be seeing Ruben, the last time you were here, you discussed XYZ, he sent an email asking for pricing that you sent, you want to close that quote, get an update on the 2 projects and you need to ask about late payment.
Key: Sandy consolidates data and gives insights
Retrieval-Augmented Generation (RAG) - CRM, Internet, LinkedIn, manager input, no input

This data comes directly 1:1 from Salesforce or other CRM, often deals will have a caution (example: no activity in 2 weeks, we shall be able to view CRM and add a flag of our own, i.e. no physical visit in defined days.
Manual interaction required, click and confirm to send updates to CRM.

1:1 passthrough from CRM, manager view can assign tasks on the fly, new tasks added while in transit gets a new notification, e.g. manager sees that you are going to Mario's concrete, manager adds "ask Mario if he is free for golf" task gets added and user gets notification of new task added in app
